

AI Needs Radar

Weekly insights from global tech communities

2026.06.07 — 2026.06.14

Issue #7 • Generated 2026-06-14

671

discussions analyzed

34

needs gaps surfaced

7

categories covered

14

big-company opportunities

// TOP 10

Top 10 Needs by Heat

The hottest needs across all categories this period.

#01 Ai code quality unreliable, review slower than writing 9/10

AI Development UP • AI generates code fast, but every line needs manual review;

#02 Ai assistant too proactive, executes unintended actions 8/10

AI Tools UP • AI executes dangerous commands like deleting files or changi

#03 Llm bash commands often wrong, params and versions mismatch 8/10

AI Development UP • AI writes curl with wrong parameter version, sed with incorr

#04 Privacy indicator too small on smart glasses 8/10

AI Hardware UP • Meta glasses have a tiny recording indicator light, barely n

#05 Pure YouTube experience without anxiety 8/10

AI Content UP • Tutorial searches flooded with controversial videos, wasting

#06 Unified AI search across all note apps 7/10

AI Tools UP • Notion AI and Obsidian AI work in silos; cross-app search re

#07 Ai tool costs skyrocket with token usage 7/10

AI Tools UP • Subscribed to AI services but easily exceed usage limits, co

#08 Ai agent stuck in tool call loops, wasting tokens 7/10

AI Development UP • AI repeatedly calls the same tool in a loop when given a tas

#09 Wasi static linking prevents hot reload 7/10

AI Development UP • Development needs dynamic component loading, but WASI only s

#10 Can't install open-source firmware on robot vacuum 7/10

AI Hardware UP • Smart vacuum cleaner tied to manufacturer cloud; no hardware

// AI TOOLS

AI Tools

6 needs • sorted by heat

1. Ai assistant too proactive, executes unintended actions • Heat 8/10

Writing a few lines triggers dangerous commands like deleting files or changing settings

PAIN Constant vigilance required; one slip could cause disaster

EXISTING Claude Fable has confirmation mode but coarse permission control, lacks granular authorization

OPPORTUNITY Build a minimal permission execution model with step-by-step authorization and audit

COMPETITORS Anthropic and OpenAI agents are overly autonomous, lacking fine-grained permissions

For: Enterprise • Difficulty 4/5 • UP

2. Unified AI search across all note apps • Heat 7/10

Notion AI and Obsidian AI work in silos; cross-app search requires manual effort

PAIN Information scattered across platforms; retrieving it is chaotic

EXISTING Each editor's AI search only covers its own data, no cross-platform query

OPPORTUNITY Unified index with AI query layer supporting any note app data

COMPETITORS Notion, Obsidian, Mem are closed, no open protocol

For: Enterprise • Difficulty 4/5 • UP

3. Ai tool costs skyrocket with token usage • Heat 7/10

Subscribed AI service easily exceeds limits, costing hundreds extra monthly

PAIN Tokens burn fast when writing or researching; end-of-month bills are shocking

EXISTING Pro subscriptions have caps, API pay-per-use is pricier; DeepSeek cheap but poor quality

OPPORTUNITY Provide usage prediction, budget control, and optional downgrade mode

COMPETITORS OpenAI and Anthropic lack usage alerts and spending caps

For: Small Team • Difficulty 2/5 • UP

4. Ai-generated slides look good but lack substance • Heat 6/10

AI presentation tools produce flashy layouts but inaccurate content

- PAIN** AI fails to grasp business details and tone; heavy manual editing needed
- EXISTING** Brightdeck and Gamma output templated content, limited deep customization
- OPPORTUNITY** An AI presentation tool that understands document logic and user style
- COMPETITORS** Brightdeck, Pitch, Beautiful.ai focus on templates, neglect content

For: Solo • Difficulty 3/5 • STABLE

5. Personal ai dashboard fails to integrate own data • Heat 6/10

Want a single view of calendar, health, tasks, subscriptions; existing solutions fall short

- PAIN** Manual assembly of widgets, data not interconnected, sync difficult
- EXISTING** Notion and Google Keep require manual setup, low intelligence
- OPPORTUNITY** One-click connect all accounts, auto-generate unified view, natural language query
- COMPETITORS** Dashboard Hub aggregates links but lacks smart integration

For: Enterprise • Difficulty 5/5 • UP

6. Ai output opaque, unable to trace reasoning • Heat 5/10

AI recommends a decision but cannot explain why it reached that conclusion

- PAIN** In critical fields like healthcare or finance, trust is low due to unknown reasoning
- EXISTING** Current models provide approximate reasoning but fragmented, no full explainability chain
- OPPORTUNITY** An AI explainability layer that shows step-by-step reasoning and evidence weights
- COMPETITORS** Anthropic and OpenAI's thinking process is unstructured

For: Enterprise • Difficulty 5/5 • UP

// AI DEVELOPMENT

AI Development

8 needs • sorted by heat

1. Ai code quality unreliable, review slower than writing • Heat 9/10

Ai produces lots of code fast, but every line needs manual review due to low trust

PAIN Ai code has logic errors or security bugs, doubling review time

EXISTING Copilot, Cursor only do completion, lack automated review for Ai-generated code

OPPORTUNITY A tool focused on reviewing Ai code, marking potential bugs and explaining logic

COMPETITORS SonarQube static analysis not tailored to Ai output

For: Enterprise • Difficulty 4/5 • UP

2. Llm bash commands often wrong, params and versions mismatch • Heat 8/10

Asking Ai for curl gives wrong params, sed escapes messed up

PAIN Cli param formats change frequently, llm training data lags, low accuracy

EXISTING Each cli has its own docs, llm can't update in real time, guesses

OPPORTUNITY A cli knowledge base with real-time query interface for accurate llm calls

COMPETITORS No product does cli dynamic adaptation, relies on model memory

For: Small Team • Difficulty 3/5 • UP

3. Ai agent stuck in tool call loops, wasting tokens • Heat 7/10

Assign task to ai, it repeatedly calls same tool, error loop

PAIN Loop count uncontrolled, costly and no progress

EXISTING Anthropic, OpenAI agent frameworks have max steps but no loop detection

OPPORTUNITY Middleware monitoring agent behavior, auto-interrupt abnormal loops and rollback

COMPETITORS LangChain, AutoGPT lack effective loop detection

For: Small Team • Difficulty 4/5 • UP

4. Wasi static linking prevents hot reload • Heat 7/10

Need dynamic component loading in dev, but wasi only supports static linking

- PAIN** Hot reload is flexibility foundation, wasi 0.3 still unsolved, project choice stalled
- EXISTING** Wasi component model only precompiled packages, no runtime loading
- OPPORTUNITY** Build wasi extension or alternative for dynamic component loading
- COMPETITORS** Java OSGi, JS dynamic import mature, wasi has none

For: Enterprise • Difficulty 5/5 • UP

5. Local ai coding assistant requires high-end hardware, single gpu insufficient • Heat 6/10

Want local model for coding, but qwen/llama quantized still needs large vram

- PAIN** Consumer gpu can't run 70b+ models, inference slow, poor experience
- EXISTING** Cline, Continue call cloud, local solutions slow and inaccurate
- OPPORTUNITY** Optimize lightweight coding model + efficient quantization for single gpu
- COMPETITORS** Ollama, llama.cpp improving but coding scenario under-optimized

For: Enterprise • Difficulty 4/5 • STABLE

6. Multi-model switching chaotic, each has own cli and usage • Heat 6/10

Using Claude Code, Gemini CLI, Codex simultaneously, commands differ

- PAIN** Switching models requires learning new interface, workflow not reusable
- EXISTING** Each company's own cli incompatible
- OPPORTUNITY** Unified cli layer, one command to call different models, config portable
- COMPETITORS** Open Interpreter feature-rich but not lightweight enough

For: Solo • Difficulty 3/5 • UP

7. Ai generated code dependency versions often incompatible, need repeated fixes-

• Heat 6/10

Llm recommends outdated library versions or conflicting deps, project won't run

PAIN Model knowledge cutoff misses new releases, generated configs fail

EXISTING Models lack real-time dependency resolution, manual compatibility check needed

OPPORTUNITY Real-time query package manager metadata, auto-select compatible versions

COMPETITORS Dependabot checks after upgrade, not for generation-time dependency selection

For: Small Team • Difficulty 3/5 • UP

8. Llm system design too shallow, lacks trade-off analysis • Heat 5/10

Ask for system architecture, ai gives generic component recommendations ignoring constraints

PAIN Proposals lack depth, ignore network bandwidth, cost, ops complexity

EXISTING Current ai agents only rough description, can't generate detailed executable architecture

OPPORTUNITY A guided multi-factor trade-off system design framework for ai

COMPETITORS AWS Well-Architected is manual, not ai-driven

For: Enterprise • Difficulty 5/5 • STABLE

// AI HARDWARE

AI Hardware

5 needs • sorted by heat

1. Privacy indicator too small on smart glasses • Heat 8/10

Meta glasses have a tiny recording light that others can't see

PAIN Indicator invisible in bright light and easily blocked, causing trust issues

EXISTING Meta Ray-Ban has LED but too small; EU requires clear indication

OPPORTUNITY Physical cover or ambient light effect that can't be bypassed by software

COMPETITORS Meta and Snap don't meet strict privacy indicator needs

For: Small Team • Difficulty 2/5 • UP

2. Can't install open-source firmware on robot vacuum • Heat 7/10

Bought smart vacuum but can't escape vendor cloud, no hardware control

PAIN Vendor lock-in, can't self-host; reverse engineering is hard

EXISTING Valetudo works but limited device support, complex setup

OPPORTUNITY Flash-and-use open firmware for mainstream models with local AI

COMPETITORS Valetudo lags in updates, lacks AI integration

For: Small Team • Difficulty 4/5 • UP

3. AI wearable battery dies in half a day • Heat 6/10

Smart glasses and rings drain fast with AI, becoming a burden

PAIN AI inference consumes power, battery can't last all day

EXISTING Hardware makers compromise on battery, sacrificing AI or endurance

OPPORTUNITY Low-power AI chip or energy harvesting integrated into wearables

COMPETITORS Qualcomm and MediaTek chips still power-hungry; Apple exploring

For: Enterprise • Difficulty 5/5 • UP

4. Voice assistant fails on complex commands • Heat 5/10

Telling Siri multi-intent commands, it only gets the first part

- PAIN** Can't have natural conversation, need step-by-step, very inefficient
- EXISTING** Siri and Google Assistant only handle simple queries
- OPPORTUNITY** AI assistant that hierarchically reasons multi-intent commands with context
- COMPETITORS** Big Tech assistants limited by legacy pipelines; LLM deployment slow

For: Enterprise • Difficulty 4/5 • STABLE

5. AI watch heart rate inaccurate, activity detection dumb • Heat 4/10

Watch often misidentifies exercise type, heart rate data fluctuates

- PAIN** Sensor accuracy and AI algorithm not well combined, affecting training
- EXISTING** Apple Watch and Garmin algorithms have large errors in some conditions
- OPPORTUNITY** More robust AI signal processing plus personalized calibration tool
- COMPETITORS** Apple, Garmin, Fitbit iterating but users still unsatisfied

For: Small Team • Difficulty 4/5 • STABLE

// AI CONTENT

AI Content

6 needs • sorted by heat

1. Pure YouTube experience without anxiety • Heat 8/10

Want tutorials only, but algorithm pushes controversial videos, wasting time

PAIN Algorithm optimizes for retention, ignores user's true intent

EXISTING NoSuggest, Unhook only block homepage, not recommendation queue

OPPORTUNITY A player that reorders videos by user interest after analyzing content

COMPETITORS NoSuggest hides but doesn't provide smart filtering

For: Solo • Difficulty 3/5 • UP

2. AI music mastering loses dynamics • Heat 7/10

AI processing boosts loudness but crushes details, sounds flat

PAIN Over-compression ruins listening experience, lack of dynamic restoration tools

EXISTING iZotope Ozone has AI but still encourages loudness boost

OPPORTUNITY AI mastering processor focused on restoring dynamics, not loudness

COMPETITORS LANDR, Acon Digital still default to increasing overall volume

For: Small Team • Difficulty 4/5 • UP

3. AI video generation slow and generic • Heat 6/10

Video models take long to output, and results look similar

PAIN Inference time-consuming, creativity limited, hard to add unique visuals

EXISTING Seedance 2.0 generates well but slow and low customizability

OPPORTUNITY Real-time interactive AI video generator for iterative director-like tuning

COMPETITORS Runway, Pika, Seedance inference time in minutes

For: Enterprise • Difficulty 4/5 • UP

4. AI writing lacks human touch • Heat 6/10

AI-written text is logical but lacks personality and warmth

- PAIN** Generic corpus leads to homogeneity, brand tone not reflected
- EXISTING** Writing models offer styles but still feel like stiff AI translation
- OPPORTUNITY** Personalized writing assistant that learns user's habits and word preferences
- COMPETITORS** Jasper, Copy.ai focus on marketing copy, not deep personalization

For: Small Team • Difficulty 4/5 • STABLE

5. Creators' work used for AI training without consent • Heat 5/10

Discovering illustrations and articles used to train AI without permission or payment

- PAIN** Copyright gray area, individual creators struggle to enforce rights
- EXISTING** H.R.6028 bill under discussion but no automated plagiarism detection and rights protection tool
- OPPORTUNITY** AI content watermarking and tracing platform to identify works in training data
- COMPETITORS** Steal This Detection, Glaze anti-AI detection but cannot trace

For: Enterprise • Difficulty 4/5 • UP

6. AI dubbing and translation lose tone • Heat 5/10

Translating video to English makes humor dull, tone distorted

- PAIN** Machine translation fails to convey emotion and cultural context, loses original meaning after localization
- EXISTING** DeepL, Google Translate insensitive to paragraph-level emotion
- OPPORTUNITY** AI tool that perceives original emotion and translates faithfully
- COMPETITORS** DeepL, Google Translate poor at cultural humor translation

For: Enterprise • Difficulty 5/5 • UP

// AI LIFESTYLE

AI Lifestyle

3 needs • sorted by heat

1. Ai-powered used electronics inspection • Heat 5/10

Buying a Macbook on Xianyu relies on seller claims, often leading to disappointment

PAIN Relies on personal judgment and experience, lacks objective reports, hard to dispute

EXISTING Inspection apps like Aisi only check hardware, can't assess screen dust or defects

OPPORTUNITY Third-party tool using photo guidance and AI evaluation for inspection

COMPETITORS Aisi Assistant and Master Lu limited to parameter checks

For: Solo • Difficulty 3/5 • UP

2. Shopping recommendations ignore past purchases • Heat 5/10

After searching for vacuum cleaners, all pages show them, annoying

PAIN Recommendation algorithms based on browsing history, not changing needs, don't filter bought items

EXISTING Amazon and Taobao recommendations can't understand completed purchases

OPPORTUNITY Cross-platform shopping assistant that records purchases and blocks repeat recommendations

COMPETITORS Honey and CamelCamelCamel focus on price comparison, not recommendation dedup

For: Solo • Difficulty 3/5 • STABLE

3. Track multiple ai subscription costs • Heat 4/10

Subscribed to ChatGPT, Claude, Midjourney etc., bills pile up unnoticed

PAIN Each service charges separately, no unified billing or usage stats

EXISTING Bobby and Truebill only manage regular subscriptions, not AI services

OPPORTUNITY Unified monitoring and management dashboard for AI subscriptions

COMPETITORS Bobby and Truebill don't recognize AI service categories

For: Solo • Difficulty 2/5 • STABLE

// AI EDUCATION

AI Education

4 needs • sorted by heat

1. Scarce Resources for Niche Languages • Heat 7/10

Want to learn African languages, few online courses, AI translations inaccurate.

PAIN Popular languages have abundant resources; niche languages lack quality content and practice.

EXISTING Duolingo, Babbel cover limited languages; Anki requires manual card creation.

OPPORTUNITY LLM-based adaptive platform for niche language learning.

COMPETITORS Duolingo, Babbel, Clozemaster have weak support for niche languages.

For: Small Team • Difficulty 4/5 • UP

2. AI Coding Assistants Hinder Learning • Heat 6/10

Ask AI for help with functions, copy answers, still don't learn.

PAIN AI becomes crutch, depriving independent thinking and trial-and-error.

EXISTING Copilot, Cursor give answers without guiding thought.

OPPORTUNITY Guided coding coach that hints next steps instead of giving code.

COMPETITORS GitHub Copilot, Cursor lack educational mode.

For: Enterprise • Difficulty 5/5 • UP

3. Knowledge Tools Lack Auto-Tagging • Heat 6/10

Want to auto-classify tech articles into knowledge base, existing tools can't.

PAIN Manual tagging and linking notes is time-consuming.

EXISTING Obsidian, Roam Research require manual bi-directional links.

OPPORTUNITY Knowledge assistant that auto-extracts keywords and creates connections.

COMPETITORS Obsidian's Graph view requires manual linking, not intelligent.

For: Solo • Difficulty 3/5 • STABLE

4. AI-Generated Exam Questions Lack Depth • Heat 5/10

AI generates mock tests with simple concept repetition.

PAIN AI lacks grasp of difficulty levels, produces low-quality questions.

EXISTING Quizlet relies on user creation; AI generation quality is poor.

OPPORTUNITY AI question generator with knowledge graph and adjustable difficulty, including detailed explanations.

COMPETITORS Aleks uses knowledge graph but not LLM, lacks flexibility.

For: Small Team • Difficulty 4/5 • UP

// AI HEALTH

AI Health

2 needs • sorted by heat

1. Ai-powered medication timing management • Heat 5/10

Need dynamic reminders that adapt to medication schedules and confirm intake via AI

- PAIN** Current reminders lack smart skip and feedback loop for missed doses
- EXISTING** Medisafe and similar apps have low intelligence, don't support complex regimens
- OPPORTUNITY** Medication management system combining AI behavior inference and camera confirmation
- COMPETITORS** Medisafe, Pill Reminder stuck on simple timed notifications

For: Small Team • Difficulty 4/5 • UP

2. Personalized heat health advice from ai • Heat 4/10

AI gives generic tips like drink water and stay indoors during heatwaves

- PAIN** AI doesn't understand individual differences (age, conditions, medications) for tailored advice
- EXISTING** CDC offers general guidelines but AI can't integrate personal health data
- OPPORTUNITY** AI system connecting wearable data to provide heat risk alerts
- COMPETITORS** Apple Health, Google Fit lack dedicated heat stress modules

For: Small Team • Difficulty 4/5 • UP

// BIG PICTURE

Big Company View (Enterprise)

Directions that need strategic synergy, scale and brand — beyond what solo or small teams can pursue.

1. Ai code quality unreliable, review slower than writing • Heat 9/10 • AI Development

Ai produces lots of code fast, but every line needs manual review due to low trust

STRATEGIC Essential for Ai dev workflow, enterprise security compliance need

INCUMBENTS GitHub Copilot, Cursor lack deep code review, trust issues hinder adoption

TIMING Ai code generation surges, quality assurance is next pain point

2. Ai assistant too proactive, executes unintended actions • Heat 8/10 • AI Tools

Writing a few lines triggers dangerous commands like deleting files or changing settings

STRATEGIC Security trust is key to AI tool adoption; solving it unlocks enterprise market

INCUMBENTS Anthropic and OpenAI lack fine-grained authorization, insufficient trust

TIMING Agent AI boom and rising user awareness; early movers win trust dividends

3. Unified AI search across all note apps • Heat 7/10 • AI Tools

Notion AI and Obsidian AI work in silos; cross-app search requires manual effort

STRATEGIC Own the personal knowledge gateway; high switching cost, huge TAM

INCUMBENTS Notion and Obsidian only handle their own data, closed ecosystem

TIMING Growing pain of data fragmentation; AI maturity enables integration

4. Wasi static linking prevents hot reload • Heat 7/10 • AI Development

Need dynamic component loading in dev, but wasi only supports static linking

STRATEGIC Control next-gen server runtime standard, tam covers wasi users

INCUMBENTS Wasi working group focuses on static, ignores dynamic loading needs

TIMING Wasi nearing 1.0, now is key window to influence standard direction

5. Personal ai dashboard fails to integrate own data • Heat 6/10 • AI Tools

Want a single view of calendar, health, tasks, subscriptions; existing solutions fall short

STRATEGIC Become the personal digital life hub; high switching cost once adopted

INCUMBENTS Google and Apple offer basic panels but lack AI integration

TIMING IoT maturity and AI understanding ripe for building a personal OS

6. Local ai coding assistant requires high-end hardware, single gpu insufficient • Heat 6/10 • AI Development

Want local model for coding, but qwen/llama quantized still needs large vram

STRATEGIC Capture edge ai inference market, partner with hardware vendors for ecosystem

INCUMBENTS Nvidia, AMD edge optimization mainly for consumer apps, coding gap

TIMING Open model capabilities improve, differential quantization breakthroughs

7. AI wearable battery dies in half a day • Heat 6/10 • AI Hardware

Smart glasses and rings drain fast with AI, becoming a burden

STRATEGIC Low-power AI chip is key for next-gen wearables

INCUMBENTS Apple and Meta are developing but haven't solved battery bottleneck

TIMING Before wearable AI boom, solving battery will dominate market

8. AI video generation slow and generic • Heat 6/10 • AI Content

Video models take long to output, and results look similar

STRATEGIC Real-time video creation is a killer app, deeply binds content creators

INCUMBENTS Runway, Stability AI too slow for real-time

TIMING Diffusion model distillation breakthrough enables real-time generation

9. AI Coding Assistants Hinder Learning • Heat 6/10 • AI Education

Ask AI for help with functions, copy answers, still don't learn.

STRATEGIC Education market is huge and long-term; guided learning shapes next-gen developers.

INCUMBENTS GitHub Copilot, Cursor prioritize efficiency, lack educational mode.

TIMING Educators worry AI causes skill decline; need solutions.

10. Ai output opaque, unable to trace reasoning • Heat 5/10 • AI Tools

AI recommends a decision but cannot explain why it reached that conclusion

- STRATEGIC** Explainability is key bottleneck for enterprise AI adoption; breakthrough unlocks high-value markets
- INCUMBENTS** Big AI labs only offer token-level thinking, not end-user explanations
- TIMING** Regulatory push (e.g., EU AI Act) drives urgent need for explainable AI

11. Llm system design too shallow, lacks trade-off analysis • Heat 5/10 • AI Development

Ask for system architecture, ai gives generic component recommendations ignoring constraints

- STRATEGIC** Boost ai credibility in enterprise architecture decisions, open high-value market
- INCUMBENTS** No dedicated ai architecture design product, consulting firms have knowledge not productized
- TIMING** Enterprise trust in ai grows, system design is next key scenario

12. Voice assistant fails on complex commands • Heat 5/10 • AI Hardware

Telling Siri multi-intent commands, it only gets the first part

- STRATEGIC** Voice as AI interface has huge value; differentiated experience attracts users
- INCUMBENTS** Apple, Google, Amazon all fail at complex commands
- TIMING** Local LLM inference chips enable low-latency voice assistants

13. Creators' work used for AI training without consent • Heat 5/10 • AI Content

Discovering illustrations and articles used to train AI without permission or payment

- STRATEGIC** Solves creator trust crisis, becomes infrastructure for AI content ecosystem
- INCUMBENTS** No mature product, legal lag, technical gap
- TIMING** Regulatory tightening globally, funding available, tech can scale quickly

14. AI dubbing and translation lose tone • Heat 5/10 • AI Content

Translating video to English makes humor dull, tone distorted

STRATEGIC Huge market from e-commerce to entertainment needs emotion-preserving translation

INCUMBENTS DeepL, Google Translate focus on literal, missing emotion

TIMING LLM emotional understanding improves but not optimized for translation

// RADAR

Opportunity Radar (Solo & Small Team)

A 2×2 grid of demand strength vs. competition density.

Build now

Strong demand, low competition

- Ai tool costs skyrocket with token usage
- Ai agent stuck in tool call loops, wasting tokens
- Can't install open-source firmware on robot vacuum
- AI music mastering loses dynamics
- Scarce Resources for Niche Languages

Watch closely

Strong demand, high competition

- Llm bash commands often wrong, params and versions mismatch
- Privacy indicator too small on smart glasses
- Pure YouTube experience without anxiety
- AI writing lacks human touch
- AI Coding Assistants Hinder Learning

Wait & validate

Weak demand, low competition

- Ai-generated slides look good but lack substance
- Multi-model switching chaotic, each has own cli and usage
- Ai generated code dependency versions often incompatible, need repeated fixes
- AI wearable battery dies in half a day
- Ai-powered used electronics inspection
- Shopping recommendations ignore past purchases
- Knowledge Tools Lack Auto-Tagging
- Ai-powered medication timing management
- Personalized heat health advice from ai

Skip for now

Weak demand, high competition

- AI watch heart rate inaccurate, activity detection dumb
- Track multiple ai subscription costs
- AI-Generated Exam Questions Lack Depth

// NEW & TRENDING

// USER VOICES

Selected User Voices

Real user comments from global tech community discussions.

"AI wrote hundreds of lines of code, but reviewing them was more tiring than writing myself; no idea where bugs might be."

— AI Development • Ai code quality unreliable, review slower than writing

"I just asked AI to organize files, and it deleted my entire project. Scared me to death."

— AI Tools • Ai assistant too proactive, executes unintended actions

"Had AI write a curl command, but the parameter version was wrong. Ended up doing it manually after wasting time."

— AI Development • Llm bash commands often wrong, params and versions mismatch

"Wearing smart glasses outside, people around me had no idea I was recording; the indicator light was tiny as a pinhole."

— AI Hardware • Privacy indicator too small on smart glasses

"Just wanted to watch a tutorial, but YouTube kept pushing argument videos. Got more anxious and annoyed."

— AI Content • Pure YouTube experience without anxiety

"Notion AI can only search Notion, Obsidian AI only Obsidian. My thousands of notes are scattered everywhere."

— AI Tools • Unified AI search across all note apps

"Subscribed to ChatGPT, Claude, Midjourney; spending hundreds of dollars a month on AI alone. The bill is shocking."

— AI Tools • Ai tool costs skyrocket with token usage

"Gave AI a task, and it kept calling the same tool repeatedly, burning through tokens without results."

— AI Development • Ai agent stuck in tool call loops, wasting tokens
